Percentage - 92.5 %

ACADEMIC PROJECTS - PROJECT LINK

V-Chat
Developed a Group Chatting Platform using Google Authentication to SignIn and storing all the messages in AES encrypted form in Firebase Firestore.

Face Recognition
A multi-pages React Application using PostgreSQL to store users credentials in encrypted format and using API to detect faces from the given image link.
Note: For using this app, you have to wait for 30 seconds as it is published on the free version of the HerokuApp.

Shortest Path Finder
Google Maps treats Intersection Points as Nodes and the path as the edges.
It finds the shortest distance using Dijikstra's algorithm and shows the best route possible.
This project is a small implementation of Google Maps.
